Re: Application for AI Systems Engineer Position at Advanced Micro Devices

Dear Hiring Manager, I am excited to apply for the AI Systems Engineer position at Advanced Micro Devices, where I can leverage my expertise in high-performance computing and graphics processing to drive growth and innovation. With my experience in developing innovative AI solutions, including a 4-stage LangGraph biomedical research agent and a fully local AI assistant on private GPU, I am confident in my ability to contribute to the development of high-performance computing and graphics processing technologies. I am particularly drawn to this role because of the opportunity to work with a leading semiconductor manufacturer and drive growth through innovative solutions. In my current role as a clinical intern at the CyberKnife Radiosurgery Unit, I have gained hands-on exposure to clinical AI-adjacent workflows and high-precision medical device operation, and I am eager to apply my skills and knowledge to a new challenge. I am excited about the opportunity to join Advanced Micro Devices and contribute to the development of high-performance computing and graphics processing technologies. Thank you for considering my application. Sincerely, Mohammad Azlaan
